Presented by the Department of Emergency Medicine and the Office of Continuing Medical Education of the Brody School of Medicine at East Carolina University in association with Eastern Area Health Education Center.

EveryDay *Emergencies*

Friday, January 25, 2013
East Carolina Heart Institute
115 Heart Drive
Greenville, North Carolina

BRODY SCHOOL OF MEDICINE OF EAST CAROLINA UNIVERSITY

About the conference

An ***Everyday Emergency*** can occur in children and adults anytime, anywhere. It may be a life-threatening condition, such as a concussion or head injury, delirium, drug abuse issue, or hypertension.

Patients with acute conditions may present to their physician's office, a clinic, an urgent care center, and the school nurse or employee health *needing immediate care*. With appropriate knowledge and available resources, many can be treated effectively in these settings while other patients will require transfer to the Emergency Department.

This conference is designed to help you decide your best course of action and how to manage those conditions that really do not require a trip to the Emergency Department.

Upon completion of this course, those attending should have greater understanding and knowledge of strategies to integrate into practice new developments in the following:

Head Injuries in Children and the Elderly • Review the epidemiology of minor head injuries • Discuss the evaluation, management and disposition of the head injured child and older adults • Discuss the indications of neuroimaging in minor head trauma • Discuss anticoagulant use and the associated risks for head injuries.

Falls in the Elderly • Review the etiology: multi-factorial nature • Determine how to evaluate • Recognize and implement prevention strategies.

Toxic in a Small Dose: When a Pill Can Kill and a Sip is Lethal • Review the most dangerous exposures for children and adults • Recognize the signs and symptoms of drugs and other toxins that can be lethal in a small dose • Gain knowledge and skill in managing these dangerous exposures.

Dermatologic Emergencies: When to *Really* Worry • Recognize and treat severe rashes caused by things in the environment • Differentiate severe rashes associated with fever • Better understand and manage reactions to medications.

Stump the Class - Using a case based, audience participation format:
• Recognize EKG findings of important, but less common clinical conditions
• Recognize radiograph findings of important, but less common conditions
• Review the evaluation and management of these conditions.

Potentially Inappropriate Medications in the Elderly • Summarize how potentially appropriate medications in the elderly were determined • Determine which psychiatric medications are preferred in the elderly • Identify potentially inappropriate drugs.

Pertussis: The Illness and the Vaccine • Recognize those at risk for Pertussis • Review the nonspecific nature of early symptoms • Recognize the life threats • Describe the importance of vaccination *Review vaccine adverse events.

Oh What a Pain • Identify strategies to successfully manage the patient with chronic pain • Review management of acute painful injuries in patients with chronic pain • Review alternatives to opioid analgesia for chronic pain.

Target audience

This conference has been planned for Physicians in Internal Medicine, Emergency Medicine, Family Medicine, and Pediatrics and may be of interest to other physician specialists, Nurse Practitioners, Physician Assistants and Emergency Medical Technicians.

EveryDay *Emergencies*

Agenda

7:45 **Registration/ Breakfast Buffet**
