Maximizing Research Team Performance: How to be a Future-Oriented Leader (even when you aren’t the person “at the top”)

Kevin Grigsby, DSW
Senior Director,
Member Organizational Development
Association of American Medical Colleges
Washington, DC

Friday, September 23, 2016  Brody 2W-40B/2W-50
3:30 pm – 5:00pm

This highly interactive workshop will help participants improve their repertoire of leadership behaviors, especially when engaged in team science.

Participants will learn the importance of fostering interdependence and helping others to find and release their "inner genius."

Dr. Grigsby focuses on organizational development in the academic health enterprise. He facilitates developing a future-oriented perspective in academic leaders and aligning organizational resources with missions. Dr. Grigsby promotes effective interpersonal communication within academic health centers and in implementing alternative conflict resolution/management strategies at the department and institutional levels.

The use of teams and other nontraditional organizational models in higher education settings is another area of scholarship. As an expert on the use of teams in academic health centers, Dr. Grigsby published an account of the use of teams to unify the clinical, academic, and research enterprises in an academic health center. This approach was instrumental in breaking down barriers that typically separate academic departments and resulted in reducing traditional barriers between employees and management, promoting faculty and staff participation in decision-making processes, and solving organizational problems that seemed to be intractable in the past.

2016 NATIONAL POSTDOC APPRECIATION WEEK EVENT

Sponsored by the ECU Office of Postdoctoral Affairs and the ECU Postdoctoral Scholar Association
