400th COPI-SERV COPIER INSTALLED AT ECU

East Carolina University's copier management program, CopiServ, celebrated its 400th copier installation at the Brody School of Medicine Cashier's Office on Thursday, February 1, 2007. In honor of reaching this milestone, the office staff, along with CopiServ employees, were treated to refreshments, and free purple and gold paper was provided for the new copier.

CopiServ is a copier management system in place at East Carolina University including The Brody School of Medicine and many of the ECU Physicians clinical operations. This service allows departments to eliminate the need to purchase a copier and maintain a service contract. It also reduces the need to stock and keep inventory of paper and toner. Through the program, customers are provided a copier to best suit their volume of copying. They pay a simple per-copy price that covers all machine supplies, paper, service, and a replacement machine at the end of that copier's useful life.

The program was implemented in August 1994. In July 1997, the 200th copier was installed at ECU. Since that time, the program has evolved to include networked digital copiers, some with color capabilities, faxing, and scanning. CopyPro of Greenville is the current contracted vendor, providing the specified copier equipment and technical service.
