College of Technology and Computer Science Holds its First-Ever Student and Employer Networking Day

GREENVILLE—(March 24, 2010)—In this economy, it is tough to find a job, any job. But that didn’t stop the College of Technology and Computer Science from holding its first annual event in the Murphy Center, from noon-4 today.

The goal of this event was to showcase exciting technology and engineering careers through a professional environment. Throughout the day students and employers had the opportunity to engage and talk about potential positions offered within their companies. Moreover, the event gave the employers a first-hand look at what the College of Technology and Computer Science has to offer as far as it’s talented faculty and top-notch undergraduate and graduate programs.

Dr. Leslie Pagliari, associate dean and organizations of today’s event has been pleased with the response she’s received from both students and employers. “We’re committed to building and collaborating alliances between our college, our programs, the business community,” says Pagliari. “In this economy, we’re happy with all the positive responses that were received.”

Students and employers had personal on-on-one time to talk and interview --the hope to walk out with an internship or potential job offer! Corporations that participated in today’s event were: AAR Corp, ABC Supply Company, Avoca Inc., Best Distributing Company, Brenntag Southeast, Inc., Cisco (CALO), CAN Technology, LLC, Credit Suisse, CWC Development, DSM Pharmaceuticals, Duke Energy, Extreme Networks, FASTERNAL, Ferguson Enterprises, Greenville Utilities Commission, Hockmeyer, Hospira, Inc., IzonData Corporation, Johnson Controls, Keihin Carolina

“This event has created a great opportunity to promote our college and programs,” says David White, dean of the College of Technology and Computer Science. “Our objective is to make this event even bigger next year.”
