Figure 5.2
Diabetes Mellitus Prevalence and Mortality Aged 20 Years and Older

Diabetes Mellitus Prevalence and Mortality
Prevalence Categories (2005)¹
- Lower Prevalence (<= -0.5 sd, or 9.3% or less)
- Higher Prevalence (>= +0.5 sd or 11.0% or more)

Mortality Categories (2003 - 2007)²
- Lower Mortality (<= -0.5 sd or 31.2% or less)
- Higher Mortality (>= +0.5 sd or 48.8% or more)
- Counties with either prevalence percents or mortality rates (or both) between -0.5 sd and +0.5 sd

Notes:
Mortality data from the NC State Center for Health Statistics via the Odum Institute, University of North Carolina at Chapel Hill.

¹Percent prevalence are estimated point values with confidence intervals, which will vary according to county population size.
²Mortality rates are age-adjusted using the US 2000 Standard Million Population. The rate is per 100,000 people over a five-year period.
