Our fellows will meet COCATS requirements for level 2 in echocardiography, level 2 in nuclear cardiology (optional), and level 1 in all other areas. In addition, fellows will get total of 3 months in electives to devote to their area of interest.

By the end of third year:
- Second year electives are earlier in the year so that they can request a rotation of interest prior to applying for subspecialty fellowship.
- First years are scheduled to have their month of TTE within the first 4 months of fellowship.
- The consult fellows on the month when there are 2 consult fellows will not have the same clinic day.
- The CIU fellow and the consult fellow will not have clinic on the same day when there is only 1 consult fellow that month.
- The CC fellows on the month when there are only 2 cath fellows will not have the same clinic day (DOES NOT apply to fellow on elective cath).
- The TTE/TEE fellows on the same month will not have the same clinic day.

The master block schedule above meets the following requirements:
- The master block schedule cannot be changed under any circumstances. The schedule has been designed for all fellows to know their 3 year schedule - all personal events/vacations should be planned accordingly.
- All fellows will be assigned the same naming scheme throughout their years of fellowship, ie 4A to 5A, 5A to 6A.
- Third year will have 2 months of elective.
- Second year will have one month of elective. Second year may have an additional 2 more months of elective if he/she does not want to be level 2 nuclear cardiology certified.
- First year will have one month of research.

Guidelines:
- Fellows at our institution will have the follow mandatory months for CIU/CICU/Consult

The master block schedule above meets the following requirements:
