Teaching Responsibilities

OCCT 6000 Foundations of Occupational Therapy (4)

Study of the underlying foundations of occupational therapy and occupational therapy models of practice. Exploration of the dimensions and characteristics of human occupation and their relationship to models of practice. Involves the analysis of occupation, including the real and symbolic aspects that are meaningful for individuals and populations.

OCCT 6005, 6006 Health Impairments and Occupational Therapy I (3,1)

Study of the etiology of impairments and models of ablement/disablement. Identification of the consequences of diseases, injuries or disorders and their impact on human occupation. Application of appropriate occupational therapy frames of reference and remedial techniques will be explored.

OCCT 6100, 6150 Therapeutic Use of Human Occupation II (3,1)

First of three courses designed to provide students with knowledge and understanding in client compensation and education. Case studies will be used to represent different treatment settings that require minimal supervision, resources, requirements, systems coordination, and clear reimbursement protocols.

OCCT 6200, 6250 Therapeutic Use of Human Occupation II (4,1)

Continuation of OCCT 6100, 6150. Case studies will reflect more complex health care systems, reimbursement issues, and professional support environments.

OCCT 6650 Conducting Research in Occupational Therapy (3)

Design and implement a research project that contributes to the knowledge base of occupational therapy, including an approved research proposal and the completion of collection of the research data.

OCCT 6660 Master's Project (3)

Completion of a research project that contributes to the knowledge base of occupational therapy, including a manuscript appropriate for submission to a referred journal.

OCCT 7000 Thesis (3)
