

### **Myra Mallison**

Myra graduated in 1999 and worked almost three years near Manhattan in a hospital setting. The setting was a mostly geriatric rehab on a unit funded by Medicare for a 7 day length of stay. She then returned to North Carolina and worked PRN at Durham Regional and Raleigh Community while seeking full time work. In 2002, she began working in pharmaceutical clinical research in the Research Triangle, traveling for four years to medical offices across US/Canada reviewing the side effects of subjects taking the investigational products. Now she manages the clinical teams who travel and is the liaison to the pharmaceutical study managers. Her study experience includes asthma, a-fib, CHF, macular degeneration, and Hepatitis B.
