4.4 Competencies. Consistent with objectives of the MPH program, student achievement of competencies is assessed during their enrollment in the core classes. Students who do not meet core competencies identified through course learning objectives are reported to the academic advisor. Students will be required to successfully conduct remediation to accomplish the competency before graduation. The remediation process can be discussed with the student’s academic advisor. Students attain 20 basic public health competencies prior to graduation and competencies are measured in the professional paper and internship (Appendix 1-2). Competencies are measured at several points throughout the curriculum, such as course work, internship and professional paper.
