Manually Configure the Buccaneer Network on your Laptop

Laptops that login to the Intra domain will automatically be configured to connect to the new security enabled wireless network, Buccaneer.

Devices that do not log into the Intra domain, the wireless network connection is manually configured.

Windows management of wireless network adapter is the supported configuration for connecting to Buccaneer.

First, right-click the 📡 icon in the System Tray, in the bottom right of the screen, near the Windows clock.

Select View Available Wireless Networks.

Select Change the order of preferred networks from the left pane.

![Wireless Network Connection](image)
In the Wireless Network Connection Properties window, click **Add**.

In the Wireless network properties window input the following selections. Screen should look like the one displayed below.

**NOTE:** If WPA2 is not a choice, see the Troubleshooting guidelines link on the instructions page.
Click the Authentication tab, input the following selections. Screen should look like the one displayed below.

Click Properties, input the following selections. Screen should look like one displayed below.
Click the Configure button. Uncheck **Automatically use my Windows logon name and password (and domain if any).**

![EAP MSCHAPv2 Properties](image)

Click **Ok** to close the **EAP MSCHAPv2 Properties** window.

Click **Ok** to close the **Protected EAP Properties** Window.

Click **Ok** to close the **Wireless Network Properties** Window.

You should now be connected to Buccaneer and should see a message balloon instructing you to “Click here to select a certificate or other credentials for connection to the network buccaneer”. Click the balloon to display the **Enter Credentials** window.
In the Enter Credentials window enter your PirateID and Passphrase. In the **Logon domain:** field enter INTRA. Click **OK** to close the Enter Credentials window and be logged onto buccaneer.

![Enter Credentials window](image)

Next you may momentarily see a message balloon stating “This connection has limited or no connectivity.” This balloon requires no action.

![Message balloon](image)

Finally you will see a message balloon stating “Wireless Network Connection is now connected” and you are connected to buccaneer. At this point you will log into Cisco Clean Access (CCA) client using the popup client window or by logging in when you open your web browser.
