Configure the PROSet Wireless Card for Your Personal Computer

Right click the Intel PROSet wireless client icon. Click the window to open the configuration client.

Click once on buccaneer to select and then click the Profiles button.
Click Next to continue adding the buccaneer wireless connection

**General Settings**

- **Profile Name:** buccaneer
- **Wireless Network Name (SSID):** buccaneer

The Profile Name is your name for the network. Example: Home or Office. The Wireless Network Name (SSID) is a unique identifier that differentiates one wireless network from another.

- **Operating Mode:** Network (Infrastructure)
- **Network (Infrastructure) - Connect to wireless networks and/or the Internet.**

Click the More>> button

**Security Settings**

Provide the username and password needed to authenticate with this wireless network.

- **Prompt for the username and password**
- **Use the following username and password**

  **Username:**
  
  **Domain:**
  
  **Password:**
  
  **Confirm Password:**

If you want to see additional settings click More. Note that some of these settings may not be valid for your network.

Click the More>> button
Change the Authentication Type to PEAP, enter your PirateID. Enter intra as the Domain. Enter your passphrase and confirm your passphrase. Click Next to continue adding the buccaneer wireless connection.

Verify the Validate Server Certificate box is checked. Scroll through the Certificate Issuer drop down list and select Go Daddy Class 2 Certification Authority. Click Next.
Click Ok to complete the buccaneer wireless configuration. You will see a Dialog indicating the successful connection to Buccaneer wireless network.
To change the stored passphrase in the wireless configuration

**NOTE:** the stored passphrase must be changed after your password is changed and before the laptop is shutdown.

Right click on the Intel PROSet wireless configuration client icon 🌐. Click Open Intel PROSet/Wireless

Click buccaneer once to select the buccaneer profile, Click Profiles
